

## Work flow automation for Elevators

**Challenge:** Our customer an elevator manufacturer and installer had a challenge of maintain coordination between different departments like sales, maintenance, erection, accounts, factory and purchase. All these departments had to know what other department was doing. For example, when a sales order would come in sales had to intimate erection, factory and purchase. So that erection department would do a site survey. Then factory would be ready with stock and purchase would initiate buying from vendors. To add complexities the factory and office were at different locations, dispersed geographically.

**Solution by Arun InfoTech:** Arun Info Tech presented them with cost effective customized web based online solution, such that information of all departments would be in synchronization with each other. Now, for example, as soon as a sales inquiry came the sales personnel would send an online quotation after getting online approval of his manager. When order gets finalized the accounts receives the advance if any from sales. Further, erection department sends factory an online BoM. Factory checks in store if raw material is available and informs purchase department about it. Purchase raises a request to its vendors and factory store receives the material, after in-warding the erection department gets the date of delivery of elevator. Finally after erection sales gets intimated to collect the remaining amount as seen in recovery web page of sales module.
